

CSHGP in the Global Fight Against Tuberculosis

Office of Health, Infectious Disease and Nutrition,
Bureau for Global Health

Tuberculosis

A Global Emergency

- 1/3 of the world's population is infected with TB
- TB kills 2-3 million people each year of, 98% of whom live in the developing world
- 750,000 women die each year of TB
- Hundreds of thousands of children will become TB orphans this year
- 1 out of every 3 HIV/AIDS patients has TB

USAID's TB Strategy

GOAL

Contribute significantly to the global reduction of morbidity and mortality associated with TB

Objective

Enhance the capacity of developing and transitional countries to achieve global targets of 70% case detection and 85% treatment success rates by preventing and curing active TB

USAID'S Approach

- Expand and strengthen DOTS programs
- Increase and strengthen human resource capacity
- Develop and disseminate new tools and approaches
- Adapt DOTS to address special challenges

Partnering With PVOs

- Expanding global partners
- Traditional activities
- Extend the NTP
- Community centered approach
- Awareness raising

TB & the CSHG Program

- Full and partial TB applications accepted
- No exemption for 100% TB proposals
- Not less than 4 years in length
- Consistent with the DOTS strategy
- PVOs will need to demonstrate a clearly defined role within the context of a NTP
- Demonstration of past performance / collaboration
- Monitoring & evaluation

TB Country Programs

USAID – 2002/2003

Asia/Near East
